

Good Morning Everyone, I am nitesh, here to tell little bit about me, --intro for website—

Let's Get Started ,to go on a journey about me to understand more about me and giving to reasons to select me 😊.Here I have identified 5 words that somewhat define me and I will try to justify each word with a few examples

I joined HSBC as a graduate 2.5 years back after doing by B.tech in Computer Science from Thapar University Patiala. My Journey so far has been really enriching and exciting, I have grown and learnt a lot of things , more than I would have thought.

Let me start by telling some tangible achievements of the work here, that will tell you why I am a **Performer**.

So far I have worked on nearly 15 different projects, working on blockchain projects like Proxy Voting ( which have 2 industry Awards ) , Corporate Actions which was the first project to be funded by the GBM Innovation board .Projects on Machine Learning like the Automated Minutes of meeting , which won the first Prize in Code Grind .I also Worked on ABCIPL was ai and blockchain based platform for gamified learning platform for Predicting the Results of IPL in which more than 200 people participated actively for 3 months.I was also part of the Joinme which a ilab project with Employee Insight Team and was launched the CEO of UK Bank which now has successfully completed it's Pilot in the UK with over 4k users and 25k events and is now is getting ready to be rolled out in production.

The projects I have worked on have also been recognised at various platforms and I have won 6 awards so far.

I don't limit myself to any technology or language I don't have a preferred language and that is why I have experience of working on 25+ Technologies including corda,kotlin ,python , go .I try not fit technology to the problem.

I believe in sharing my knowledge and have so far given training on many different things I know to more that 400+ people in HSBC.

I have also recently published a paper on Blockchain based Data sharing framework and my Paper on Cloud Sentiment Analysis using twitter in under Review.

~~I reason I have been working on so many technologies and different kinds of project because I am a Unconventional Thinker .I try to find unique solutions to problems I encounter, so far working with a lot d on all my different projects and business areas has really helped me with helped be grow as Unconventional Thinker .It's like what Frans Johansson, Medici Effect , Best innovation Occur at intersection.~~

Working of all these different projects in different areas and technologies a evolved my thinking helped with think outside the box finding unique and unconventional solutions to problems and challenges I face. It's like what Frans Johansson, Medici Effect Said, Best innovation Occur at intersection.

Some examples would be I developed a tool that will generate your resume from the commits you do on alm-github ,URL shortner .

I can't keep being unconventional If I don't upgrade myself that leads to my next point , I am always inquisitive , I like always have a thing I am learning currently actively and I am always curious to find anything I don't understand and I keep doing courses/certifications to enhance my technical skills.

You might be wondering how can I manage to do all this , it is because I am passionate about the work I am doing , I have sat in office till late in night maybe 4 am not because I have project deadline tomorrow but because there is some bug I don't understand .This is reasons i take up lot of work outside my day job be it working in the iLabs , taking part in Hackathons or helping other team in their projects . I like to collaborate with others on thinks i know

I never say no to helping anyone be it helping my teammate or unknown, I find collaborating fun , it is the best opportunity to learn and become better in your skill.I give trainings whenever I can on whatever I know , I have given trainings on topics like model T , AI , Blockchain to groups as small as 4-5 to as big as 100.

So why do I want to do EEP?

This will help me enhance my leadership skills , network with the some of the best minds including both the Faculty and the Fellow Participants and equip me with better understanding of making business oriented solutions.

I will help me grow my Analytical and Technical Skills that would enable me to Shorten the bridge between IT and Business , help in my path to being a leader , Broden My knowledge about the company and the people in it, Allow me to share my knowledge and learn from the experience of others like and unlike minded people making me an enterprise Engineer.

It helps me become a better Innovator and Technologist who solves business problems and leads and enables other in doing the same

Thank You
